Newcastle firm discovers new breakthrough antibiotic that can combat tuberculosis [CHRONICLE LIVE]

December 9th, 2018

A bioscience company in Newcastle has discovered a new antibiotic that could treat 600,000 cases of drug resistant tuberculosis every year. Demuris Ltd has worked with UK and US scientists, to identify the new antibiotic, which could help the 1.7 million people who die every year from tuberculosis. The new drug is known as Kanglemycin A and works by binding to an essential enzyme on the bacteria that causes the disease. However, crucially, it does not bind to the human enzymes.
